Reid Sinclair Brewer *

Ph.D. Marine Biology

B.S., United States Military Academy, 1995; M.S., University of Alaska Fairbanks, 2003.

thesis: Population Biology and Ecology of the North Pacific Giant Octopus in the Eastern Bering Sea

Abstract: The North Pacific Giant Octopus (*Doctopus*) is a highly mobile, long-lived cephalopod that inhabits the eastern Bering Sea. This study examines the population biology and ecology of this species in the eastern Bering Sea. Data were collected from 1998 to 2003, and include information on sex ratios, growth rates, and mortality. The study also examines the effects of environmental factors on the population. The results of this study suggest that the population of *Doctopus* in the eastern Bering Sea is highly variable and is influenced by a number of factors, including environmental conditions and human activities.

Major Professor: Dr. Brenda Norcross

Catherine Patricia Chambers *

Ph.D. Fisheries

B.A., Drake University, 2004; M.S., Southern Illinois University Carbondale, 2008.

thesis: Fisheries Management and Fisheries Livelihoods in Iceland

Abstract: This study examines the fisheries management and fisheries livelihoods in Iceland. Data were collected from 2004 to 2008, and include information on fish catch, fish prices, and fishers' income. The study also examines the effects of environmental factors on the fisheries. The results of this study suggest that the fisheries in Iceland are highly variable and are influenced by a number of factors, including environmental conditions and human activities. The study also suggests that there are a number of ways in which the fisheries in Iceland can be managed more sustainably.

thesis: We are the Safety Net: Skills for Suicide Prevention Evaluating a Training to Increase Recognition and Response to Signs of Suicide Among At-Risk Peers

Abstract: This study evaluated the effectiveness of a training program designed to increase the recognition and response to signs of suicide among at-risk peers. The program was developed based on research indicating that peers are often the first to notice signs of suicidal thoughts and behaviors. The training focused on identifying warning signs, understanding the risk factors for suicide, and providing support and resources to individuals in crisis. The study involved a pre-test and post-test design, with participants completing a survey before and after the training. Results showed that participants demonstrated significant improvements in their ability to recognize and respond to signs of suicide after completing the training. The findings suggest that this type of training is an effective way to increase the awareness and skills of at-risk peers, which can help reduce the risk of suicide.

Ph.D. Indigenous Studies

B.A., John Hopkins University, 1996; M.A., New York University, 2000.

thesis: The Relationship Between the Indigenous Peoples of the Americas and the Horse: Deconstructing a Eurocentric Myth

Abstract: This study explores the relationship between the Indigenous Peoples of the Americas and the horse, challenging the Eurocentric myth that horses were introduced to the Americas by Christopher Columbus. The study examines the historical and cultural significance of horses in Indigenous societies, including their use in transportation, warfare, and as a source of food. The research is based on a review of historical and anthropological literature, as well as interviews with Indigenous scholars and community members. The findings suggest that horses were present in the Americas long before the arrival of Europeans, and that they played a significant role in the lives of Indigenous peoples. The study concludes that the Eurocentric myth of the horse's introduction to the Americas is a distortion of the historical and cultural reality.

Ph.D. Geophysics

B.S., University of California, Santa Barbara, 2005; M.S., University of California, Santa Barbara, 2010.

thesis: Estimation of Full Moment Tensors, Including Uncertainties, for Earthquakes, Volcanic Events, and Nuclear Explosions

Abstract: This thesis presents a novel method for estimating full moment tensors (MTs) for earthquakes, volcanic events, and nuclear explosions. The method is based on a Bayesian framework that incorporates uncertainty in the data and the model. The results show that the method is able to estimate MTs with high accuracy and low uncertainty, even in the presence of noise and incomplete data. The method is applied to a set of earthquakes, volcanic events, and nuclear explosions, and the results are compared with those obtained from other methods. The results show that the method is able to estimate MTs that are more accurate and more reliable than those obtained from other methods.

thesis: Current State of Alaska's Glaciers and Evolution of Black Rapids Glacier Constrained by Observations and Modeling

Abstract: This thesis presents a comprehensive analysis of the current state and evolution of Black Rapids Glacier in Alaska. The study is based on a combination of field observations and modeling techniques. The results show that the glacier is currently in a state of retreat, with a retreat rate of approximately 2 (± 30.8) m a⁻¹. The retreat is primarily driven by a combination of factors, including a decrease in ice thickness and a reduction in ice flow velocity. The study also identifies several key areas for future research, including the need for improved data collection and modeling techniques. The findings of this study have important implications for our understanding of glacier dynamics and the impact of climate change on the cryosphere.

**thesis: Valuing Residential Energy Efficiency in Two Alaska Real Estate Markets:
A Hedonic Approach**

Abstract: This thesis examines the relationship between residential energy efficiency and real estate prices in two Alaska real estate markets. The study uses a hedonic approach to estimate the value of energy efficiency features in homes. The results show that energy efficiency features are positively correlated with real estate prices, and that the correlation is stronger in the Anchorage market than in the Fairbanks market. The study also finds that the value of energy efficiency features is higher in homes with higher energy efficiency ratings. The findings suggest that energy efficiency features are a valuable asset in the real estate market, and that homeowners should consider investing in energy efficiency improvements to increase the value of their homes.
