

Outer Space Pretend Play

Let your imagination blast off into outer space!

Astronauts and scientists study the Earth from outer space. They take pictures of Earth's surface and measure cloud cover, sea levels, glacier movements, and more.

Instructions:

Step 1: Work together with your child(ren) to create an area for your space station. Use cardboard boxes or pieces, aluminum foil, recycled plastic bottles, yarn, ribbons, bottle caps, fabric scraps, or any other materials you have available. It can be as small or as large as you want it to be.

Step 2: Pretend to be an astronaut on your space station. Let your child lead with ideas for imaginative play!

Studying Earth From Above

NASA is best known for exploring outer space, but it also conducts many missions to investigate Earth from above. Scientists use the information they collect to better understand our changing planet.

Astronauts on the International Space Station use cameras and scientific instruments to take photos and collect data about Earth. They track and measure cloud cover, ocean currents, air pollution, hurricanes, glacier movements, floods, forest fires, wind speed, urban lighting, and more.

The International Space Station orbits about 250 miles (400 km) above Earth's surface.
