Course designed for geographic information systems, life biologists, fish and wildlife managers, and forest and fire managers. This course covers the use of spatial data in the field and the typical workflow for a GIS project. This course is on obtaining and using geographic information systems data.

Students will learn the basics of ArcGIS if you are using a windows-based computer. If you do not have your own computer, you can work with a partner in our computer lab.

Week 1

Course Objectives

- 1) To learn the basic concepts of GIS and how to use GIS software.
- 2) To understand the concepts of spatial data and how to use GIS software.
- 3) To learn the basic concepts of GIS and how to use GIS software.
- 4) To learn the basic concepts of GIS and how to use GIS software.
